

Training Overview

Leading training center for high-pressure hydraulic tools

THE POWER OF KNOWLEDGE

Do you work with high-pressure hydraulic tools regularly or even every day? Operating such tools requires sound knowledge of how they work and should be maintained. Effective use of these tools boosts safety and reduces risk - both for you as the operator and for the environment within which the tools are used. Having the right training will enable you to use the tools safely and properly.

Energac Academy is the in-house training center that Energac has set up exclusively for Energac employees, Energac business partners, and Energac users. Energac Academy offers a meticulously compiled training program covering tool knowledge, repairs, maintenance, and safe operation of high-pressure hydraulic tools.

Bolstering employees' & users' knowledge

Energac Academy offers you the exclusive opportunity to train your (new) employees in making proper use of Energac tools. Our training not only teaches them to work safely with a wide range of tools, but also covers maintenance and repairs. The acquired knowledge will prove essential and valuable in the day-to-day use of Energac tools. The added value has furthermore been proved in the safe application of our tools.

Our Energac distributors are frequent users of Energac Academy's training services. That way we guarantee that their sales and service staff are always up to date with the latest knowledge of Energac tools. The training program forms an integral part of our collaboration with our distribution channel, ensuring that knowledge and skills are also available to you and the users of our tools.

PUTTING THEORY INTO PRACTICE

The training courses are interactive and benefit from a highly diverse program that puts the covered theory into practice right away. This happens in an interactive manner that allows ample room for instructors to address questions from participants.

Our training services are grounded in many years of experience in providing and applying Energac tools. All material learned at Energac Academy training courses can instantly be put into practice on the shop floor.

Energac Academy is all about sharing knowledge about our tools, their technical features, and their application.

- Specialist in-house Enerpac training center
- Both a standard training program and tailored training services
- Highly experienced trainers
- Selection of training courses with a proven (value adding) track record
- Knowledge and experience sharing
- User and tool safety comes first

Tailored training

Basing our training services on our trainers' experience and our distributors' preferences enables us to offer you a meticulously compiled training program. The length of our training courses varies from half a day to several days, depending on the subject. Please find more information about training durations in the training overview.

Do you have a practical technical problem? Do your employees need more ways of applying or using Enerpac hydraulic tools? Or do they need training showing them how to service the tools? If our training program does not meet your specific training needs, Enerpac Academy goes that one step further by offering you the opportunity of taking advantage of our tailored training service. Whatever you need, we can offer the right training. That will help you make the most of the training. Some training courses or sessions include a training-on-site option. Please inquire about your options.

Training material

Lessons are taught based on theoretic explanation supported by exploded models of our tools. Our students have the opportunity to actually work with the tools while in training. Virtually every training course we offer gives participants the opportunity to put theory into practice, by doing some actual work with the tools.

Our specially developed training material is visually attractive, and therefore highly accessible and easy to use. Training is given in English, and the visualizations make it perfectly understandable for non-English speakers as well. There is also the possibility of organizing training courses in other languages, in collaboration with the corresponding regional Enerpac organization. A number of our training courses are concluded with a multiple choice exam. Participants will receive a certificate of participation.

WHAT OTHERS SAY

"I have just completed the Enerpac Bolting Training CBT 1&2 in Holland and just wanted to say how helpful it has been in being able to discuss and select the correct equipment and operational procedures on a wind farm project I am currently involved with. The training was a great help in obtaining a nice order this week for the offshore wind project. I think I would have lost the order to our competitor if I had not been able to demonstrate proficiency in how to overcome a difficult application requirement."

Nigel Smith, Armstrong Lyon Hydraulics Limited (UK)

"Enerpac organized a special repair training for one of our important customers. The feedback they gave after the training was that the training was very clear and concise. Even for one of our technicians who had no previous experience with pumps, the training was easy to follow. We received several good tips and advice on how to safely disassemble the pumps and which possible wear and tear elements should be inspected. The day after the training our technicians were able to put theory into practice, they were able to repair two of our pumps."

Sales Engineer, Mennens (Belgium)

TRAINING OVERVIEW

Training course	Duration	Course Summary	Target audience	Skills reviewed during training
Bolting Intro. Training	1 day	Explanation of torquing and tensioning techniques and the Enerpac Bolting product range	Distributor sales professionals, end-users	<ul style="list-style-type: none"> ● Bolting tool theory and tool applications
Controlled Bolting Training CBT-1	1 day	Bolting theory, use of hydraulic torque wrenches and pumps (includes hands-on training)	Distributor sales professionals, technicians, end-users	<ul style="list-style-type: none"> ● Bolting tool theory and tool applications ● Competitor review and comparison ● Safe and efficient use of torque wrenches and pumps
Controlled Bolting Training CBT-2	1 day	Bolting theory, use of hydraulic tensioners and pumps (includes hands-on training)	Distributor sales professionals, technicians, end-users	<ul style="list-style-type: none"> ● Bolting tool theory and tool applications ● Competitor review and comparison ● Safe and efficient use of tensioning tools and pumps
Controlled Bolting Training CBT-1&2	2 days	Bolting theory, use of hydraulic torque wrenches, hydraulic tensioners and pumps (includes hands-on training)	Distributor sales professionals, technicians, end-users	<ul style="list-style-type: none"> ● Bolting tool theory and tool applications ● Competitor review and comparison ● Safe and efficient use of torque and tensioning tools and pumps
Application Training	½ day	Tool application review, analysis, discussion and suggestions	Distributor sales professionals	<ul style="list-style-type: none"> ● Safe use of hydraulic tools ● Tool features and benefits ● Market information
General Hydraulic Sales Training	½ day	Enerpac model numbers, basic hydraulics and system selection, applications, catalog review, safety, do's and don'ts when ordering Enerpac products	Distributor sales professionals (inside sales and external sales)	<ul style="list-style-type: none"> ● At home with the Enerpac catalogue ● Knowledge of hydraulics and the application of hydraulic tools. ● Features and benefits of Enerpac hydraulics and application for daily sales
Safety Training	½ day	Enerpac tool safety training, explaining the do's and don'ts when working with high-pressure hydraulics	All Enerpac users	<ul style="list-style-type: none"> ● Safe use of high-pressure hydraulic tools ● User safety ● Environmental safety
Industrial Tools Service and Repair Training	Based on desired tool selection	Inspection and repair of Enerpac Industrial Tools and/or related products	End-users, selected by an Enerpac Authorized Service Center, or through your regional Enerpac organization.	<ul style="list-style-type: none"> ● Repair and maintenance of general Enerpac tools (or other selected tools, depending on specific tool selection)
Industrial Tools Sales Training	Based on desired tool selection	Basic sales knowledge on features of Enerpac Industrial tools and related products	Distributor sales professionals	<ul style="list-style-type: none"> ● Features and benefits of Enerpac hydraulics and knowledge application during daily sales
Workholding (Production Automation) Sales Training	Based on desired tool selection	Basic sales knowledge on features of Enerpac Workholding (Production Automation) tools and related products	Distributor sales professionals	<ul style="list-style-type: none"> ● Features and benefits of Enerpac Production Automation and knowledge application during daily sales
Integrated Solutions Product Sales Training	Based on desired tool selection	Basic sales knowledge on features of Enerpac Integrated Solutions tools and related products	Distributor sales professionals	<ul style="list-style-type: none"> ● Features and benefits of Enerpac Integrated Solutions and knowledge application during daily sales
